Risk and reward profile

The Risk and Reward Indicator table demonstrates where the Fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the Fund. The shaded area in the table below shows the Fund's ranking on the Risk and Reward Indicator.

This Fund is classified in the Level 7 risk category. This is due to historical price movement of such investments. The lowest risk category does not mean that your investment will be risk free.

Please note the Fund's risk category may change in the future. The indicator does not take into account the following risks of investing in this Fund:

As the Fund invests in securities with exposure to a commodity, or use derivatives to track the price of the underlying commodity (ETCs), it is considered to be high risk which may result in fluctuations in the value of your investment.

There can be no assurance that any appreciation in the value of investments will occur.

The value of investments and the income derived from them may fall as well as rise and investors may not recoup the original amount they invest in the Funds.
