Risk and reward profile

The Risk and Reward Indicator table demonstrates where the Fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the Fund. The shaded area in the table below shows the Fund's ranking on the Risk and Reward Indicator.

This Fund is ranked 5. This is due to historical price movement of such investments. Please note that even the lowest risk class can lose you money and that extreme market circumstances can mean you suffer severe losses in all cases. Please note the Fund's risk category may change in the future. The indicator does not take into account the following risks of investing in this Fund:

Because this fund invests mainly in property related assets, it is particularly vulnerable to market sentiment towards the property sector when compared to funds that spread risk by investing in a range of assets.

In difficult market conditions and for certain assets there may be a reduction in buying and selling activity making it difficult for the Fund to buy or sell, which may mean the Fund sells at lower prices and misses investment opportunities, having the affect of reducing Fund returns.

As the Fund invests in a particular sector there may be greater fluctuations in the value of your investment.

Bonds are affected by changes in interest rates, inflation and any decline in creditworthiness of the bond issuer. Bonds that produce a higher level of income usually also carry greater risk as such bond issuers may have difficulty in paying their debts.

Further details on risk factors that apply to this Fund are set out in the Risk Factors section of the prospectus.
