The investment style is to take advantage of relative valuation opportunities in equity markets judiciously adjusting the composition of the portfolio while maintaining a view on the benchmark.

First, the portfolio management team updates its view of the global economic situation by analysing a number of Fundamental, cyclical, and technical factors:

Fundamental

- Underlying Global economic, current & forecast, economic data
- Movements in other global markets
- Global Central Bank policy
- Inflation/growth expectations
- Valuations and yields in other asset classes (e.g.: equities and bonds)

Cyclical

- Seasonal patterns in the market – namely equity, bond & precious metal cycles
- Major and intermediate time cycles in the Equity market

Technical

- Primary market trend analysis and interpretation
- Analysis of ‘oversold’ & “overbought” conditions

After the management team has identified where it believes the most value lies in the market, it has at its disposal a set of investment management techniques that in the proper combination can help to enhance Fund performance.

3.2 To what extent is any Fundamental research undertaken proprietary? How much use do you make of broker contacts?

The fund will continue to pursue its current strategy of investing in precious metals miners, different aspects of alternative energy, pharmaceuticals, with the possibility of technology, in particular security software.
