Risk and reward profile

The Risk and Reward Indicator table demonstrates where the Fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the Fund. The shaded area in the table below shows the Fund's ranking on the Risk and Reward Indicator.

This Fund is ranked at 5. This is due to historical price movement of such investments. Please note that even the lowest risk class can lose you money and that extreme market circumstances can mean you suffer severe losses in all cases. Please note the Fund's risk category may change in the future. The indicator does not take into account the following risks of investing in this Fund:

The Fund will occasionally write covered options. The premium received for these positions may help increase the income of the fund but in certain market condition the covered options may contain the capital growth.

The Fund can use derivatives in order to meet its investment objectives or to protect from price and currency movements. This may result in gains or losses that are greater than the original amount invested.

In difficult market conditions and for certain assets there may be a reduction in buying and selling activity making it difficult for the Fund to buy or sell, which may mean the Fund sells at lower prices and misses investment opportunities, having the effect of reducing Fund returns.

Further details on risk factors that apply to this Fund are set out in the Risk Factors section of the prospectus.
