Risk and reward profile

The Risk and Reward Indicator table demonstrates where the Fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the Fund. The shaded area in the table below shows the Fund's ranking on the Risk and Reward Indicator.

The Fund is ranked 3 because funds of this type have experienced below average rises and falls in value in the past. Please note that even the lowest risk class can lose you money and that extreme market circumstances can mean you suffer severe losses in all cases. The risk and reward profile is not guaranteed to remain the same and may shift over time. The indicator does not take into account the following risks of investing in this Fund:

Interest Rate Risk: Fixed interest securities are affected by trends in interest rates and inflation. If interest rates go up the value of capital may fall and vice versa. Inflation will also decrease the real value of capital. The value of a fixed interest security is also affected by its credit rating.

Concentration Risk: The Fund holds a limited number of investments. If one of these investments falls in value this can have a greater impact on the Funds' value than if it held a larger number of investments.

Financial Techniques Impact: The Fund may invest in derivatives. A relatively small movement in the derivative's underlying investment may have a much larger impact, positive or negative, on the value of the fund than if the fund were to hold the underlying investment itself.

For further risk information please see the Risk Factors section of the prospectus.
